Max	-	-	-	-	-	#DIV/0!

Analysis

Laura is the top performer, not only leads in total sales but also reach the highest peaks. She is a strong benchmark to analyze best practices.

Ana has the lowest total contribution, the difference is not extreme but is a good opportunity for coaching and improvement.

Sales distribution is relatively balanced across the team, that indicates operational stability

There is high variability in individual sales performance, the difference between the max and the min sales suggest inconsistent
